

WODI · BUILD SPEC

Partial round & ladder legibility.

The AMRAP card buries its own structure: the bar-ladder implies **everything** ramps, the burpees float as a disconnected "36 TOTAL", and the partial 7th round isn't shown as partial. Below is the fix — built faithfully so the rebuild can match it 1:1. Markers ①–⑤ map to the notes on the right.

①–⑤ map to the notes on the right.

1 Only the ladder movement gets bars

The ladder graphic represents **one** movement — the one whose reps climb. Solid gold bars = rounds fully completed (2 → 12). Add a **cadence** caption under it ("+2 reps every round") so the rule is stated, not guessed.

2 Partial round = a ghost rung, not a measured fill

The unfinished 7th round is a **dashed-outline rung with a fixed yellow half-fill** — a **convention** meaning "in this round, didn't finish," not a measured level — the **+10** sitting inside it. **Do not**

scale the fill to

reps_done /

round_target : a

round is often
several movements,
so reps-into-round
don't map to a
knowable height.

The half is a **symbol**;
the dashed top
shows the rung
continues, and the
+10 carries the
number.

3

Constant movement says "every round," not a total

Replace 36 TOTAL

with "**6 every**

round." The per-
round rule is the
structure; the total
hides it (and made
the card un-
checkable). If you
want the total, it
belongs in the
breakdown line, not
as the movement's
label.

4

Hero is rounds + partial – no totals on the poster

An AMRAP score is
rounds + reps – lead
with **6 + 10**, not a raw
rep count nobody
can verify. The

poster face carries no rep totals; the verification math (shown below) lives in the **log / edit view**, where it catches a count that doesn't reconcile — never on the shared poster.

⚠ The original "104 REPS" doesn't reconcile

From the structure shown, the rep total should be:

```
lunge-press
2+4+6+8+10+12
= 42 +
burpees 6×6 =
36 + partial
10 = 88
```

The live card shows **104** — a 16-rep gap I can't account for. Either the rep counter is wrong or the structure differs from what the card implies. **Confirm the intended structure before shipping the number** (mock uses 88 as the consistent value).

The structure, stated plainly

This is what "anyone understands it easily" has to land. One round =

LADDERS ↑
2 → 4 → 6 → 14...
