

Partner Metcon — the pairs layout, fixed.

The shipped card is a **solo template wearing a partner label**: no partner named, a lone "ME" column whose numbers contradict the prescription, and a clock that's framed as personal when it's the **team's** result. wodi's poster engine already has a real pairs mode — PairsLegend + MineCell. Below: what shipped, and the same WOD rendered correctly through it.

BEFORE
 what shipped

AFTER
 engine pairs mode · Chalk

The other partner format: split the rounds.

You named the two cleanly: **split the reps** (the fix above — ME is a number per movement) and **split the rounds** — "you go, i go", where partners trade whole rounds. These need **different ME readouts**. In a rounds-split, a per-movement ME number is meaningless: in any round, whoever's up does **all** the movements. What's personal is **which rounds you took** — so the ME column gives way to a round **ledger**.

A The movement lines describe ONE round

No per-line ME number — in a you-go-i-go, the person up does the whole round. So the prescription reads clean and full-width: **5 Clean & Jerk · 5 Burpee**, your load sitting as the same quiet tag (**@ 45kg**).

B ME becomes a round ledger

The split **is** the story, so show it: 12 chips, **gold = the ones I took**, dashed = Mara's. It reads "you go, i go" at a glance and tallies **6 · 6** underneath — the personal stat is **rounds**, not reps.

C Same shared hero

Both formats end the same way — **our time** is the one number you both own. The hero never changes between split-types; only the ME readout above it does.

→ What the engine needs

One flag — `wod.split: 'reps' | 'rounds'`. On `'reps'` keep `MineCell`. On `'rounds'` swap it for a `RoundLedger` fed `wod.rounds: ['me', 'par', ...]`. Each skin styles the chips in its own language (gold fills here; LED pips on Stadium; dimension ticks on Blueprint).

WHAT WAS WRONG → WHAT THE ENGINE DOES

1 It never said who you trained with

A partner poster's whole point is the **"with..."**. The shipped card drops it entirely. The engine reads `wod.partner` and prints **"· with Mara"** in the subtitle — and the metadata states the format **once** (no "intervals" vs "rounds for time" contradiction).

3 The "ME" numbers contradicted the WOD

Prescription said **5**, the ME boxes said **3** — unexplained. `MineCell` renders **your real share** as the handwritten hero (30) with your load as a **quiet tag** (45kg) — a fact, never competing with the prescription.

2 One "ME" column with no "TEAM"

A lone right rail labelled ME implies the left is... nothing. `PairsLegend` names **both scopes** — **TEAM | ME** — so the left reads as the shared prescription and the right as your personal contribution.

4 The clock was framed as personal

"result · 12:00" sits in the ME-flavoured layout, but a partner finish is **shared**. The engine labels the hero **"our time"** — the one number you both own — so the biggest thing on the poster is the thing you did together.

5 **No vibe, no sign-off polish**

FELT was still "PICK ONE". The render applies the **SWEATY** stamp and the brand strip resolves cleanly — badge-or-nothing, then the wordmark. (No badge here: nothing to celebrate auto-detected, so it stays a clean **wodi.**)
