

DESIGN SYSTEM · JUNE 2026

wodi turns every workout into a **poster** worth sharing. The product isn't the log — it's the story you post after. This system keeps that poster unmistakably wodi across wildly different looks, and keeps it **celebratory by default**.

00 PRINCIPLES

Poster-first. Celebratory always.

Three convictions drive every decision. When in doubt, the screen should feel like a **flex**, not a spreadsheet — and it should catch you doing something **right**.

POSTER, NOT LOG

The hero is your result and your vibe. Data earns its place or it's cut. No receipts.

CELEBRATE, NEVER GRADE

Most people scale — so we never stamp them with it. The footer only ever shows a win.

ONE YELLOW, LOUD

A single brand colour means one thing: you, winning. The dark canvas makes it detonate.

01 WORDMARK

Lowercase, Barlow Condensed 900, with a **yellow period** — the dot is the brand. It never becomes an icon or monogram. On a yellow surface the dot inverts to black; everywhere else it stays yellow. It always sits in the footer, signing the poster.

wodi.

ON DARK

Warm white text, yellow dot. The default.

wodi.

ON YELLOW

Black text & dot — never yellow-on-yellow.

wodi.

ON PAPER

Dark ink text, the yellow dot survives.

02 **COLOUR**

One brand colour. Period.

Yellow is the only brand colour and it means one thing: **you, winning**. Neutrals carry everything else — a near-black field, a warm white for text, and a cream for the paper skin.

03 **VIBE STAMPS**

How it *felt*

wodi's signature mechanic — a tilted rubber stamp logging effort, not performance. Six levels. This is the **only** place a second colour appears, always contained inside the stamp. **WRECKED** is a cool steel (not white) so it stays legible on dark, paper *and* yellow skins.

04 ACHIEVEMENTS

The footer flexes a win — never a grade

The strip beside the wordmark celebrates what you **won**, and shows nothing when there's no standout. Crucially, there is **no "SCALED"**. Most people scale; branding the majority of shares with a consolation label is the fastest way to kill a post. The badge catches beginners doing something right — a first pull-up, a streak, a number beaten — not just the few who Rx.

Auto-applied, default none. A poster ships with **no badge** — the footer is just **wodi**. The badge is **auto-applied by the app** when it detects a PR, streak, or standout — the user never picks it manually.

The footer is a thin strip, not a panel: a single row (~10px vertical padding) with the badge (or nothing) on the left and the wordmark on the right. It is never a tall block of empty colour.

Two states: editing, then saved

The share screen has **two modes**. Don't show the editing controls forever.

1 · EDITING

Shown right after logging (and when the user taps **Edit**).
The poster plus a compact two-tab palette: **Style** (skins) and **Felt** (vibe). No badge picker — the app handles that automatically. Primary button: **Save**.

2 · SAVED

After **Save**, the palette **disappears** — just the clean poster, a **Share to Story** button, and a small **Edit** affordance to return to editing. This is the state the gallery/celebration view opens in.

So the loop is: **log** → **editing (pick style + felt)** → **Save** → **saved (share, or Edit to tweak)**. The palette is a creation tool, not permanent chrome.

COMPACT PALETTE — EDITING STATE

SAVED STATE

05 TYPE

Four voices

Barlow Condensed shouts the hero numbers, Barlow speaks the UI, DM Mono labels the meta, Caveat signs your personal weights.

06 SPACING & RADIUS

4px base

Everything snaps to a 4px grid. Radii climb from the stamp to the whole poster.

4 · sp-1	inline gaps	20 · sp-5	card / screen padding
8 · sp-2	label gaps	24 · sp-6	poster inset
16 · sp-4	row rhythm	40 · sp-10	hero rhythm

07 BRAND LOCK

Rendered once, reused everywhere

These components are the **same React code in every skin** — that's what keeps the brand alive through a total change of surface. They're rendered live here, straight from the poster engine.

FORMAT TAG

FOR TIME · AMRAP · EMOM · STRENGTH. Constant pill; colour adapts to surface.

★ PR

★ UNLOCKED

ACHIEVEMENT BADGE

Same component, three surface variants. Positive-only, optional.

08 HIERARCHY

The achievement is the hero — not the name

A poster exists to flex what you **did**, so the result is the single loudest element on the card (~80px) — roughly **2.4× the workout name**. The session name is a small reference label above it, never the headline. This holds whether the result is a time, rounds, or a top-set weight.

1

Result

Time · rounds · top set. The hero. Barlow Condensed ~80px, full width.

2

Vibe stamp + achievement

How it felt & what you won — flanking the result, not competing with it.

3

Session name

A label, ~34px. Orients the reader; never the headline.

4

Movements & format tag

The reference detail. Single-line names; loads kept quiet.

09 THE POSTER SYSTEM

Six skins, one family

Users **tap to flip** and pick their favourite. Each skin is a totally different *world* — a flyer, a notebook, a billboard, a jumbotron, a hand-printed poster, an architect's drawing — but the **brand lock** rides on top of every one, so all six read instantly as wodi. The trick is yellow: it can't be text on a light surface, so each skin expresses it differently. The set is open-ended — **more skins can be added** without touching the lock.

STADIUM BROADCAST

Pure-black jumbotron. The result glows on an LED dot-matrix panel.

Yellow → the lit LEDs — score, splits & frame all glow.

PRESS HAND-PRINTED

Riso gig-poster. Bone newsprint, halftone, heavy ink.

Yellow → a misregistered overprint & halftone swatch.

BLUEPRINT SCHEMATIC

Cyanotype architect's drawing. Drafting grid, dimensioned result.

Yellow → the lone warm accent — specs & the result callout.

10 PARTNER WORKOUTS

Two scopes: TEAM & ME

A pairs workout is shared, so every number belongs to one of two scopes. The poster keeps them legible: the **left** column is what the **team** faced (the shared prescription & the clock); the **right** column is what **I** personally did. A tiny **TEAM • ME** legend names them.

TEAM Left column = the shared work

The prescription (1800m, 100 reps, 80 cal) and the clock belong to the pair. Both partners finish together.

ME Right column = my contribution

My reps as the handwritten hero + my load as a small quiet tag (50 • 40kg). Cardio shows my split (900m); bodyweight shows reps only.

The score is team-scoped — it reads “OUR TIME”, never “MY TIME,” because the pair shares the clock. The header shows “with [partner]”. Never put a team total in the ME column (the

trap: restating 1800m as 1.80km) — the ME column is always *my* number.

11 HOLDING THE LINE

Do & Don't

✓ ALWAYS

Render the brand lock with shared components

Keep yellow present in every skin, somehow

Anchor the wordmark to the footer

One vibe stamp — tilted, vibe-coloured

In pairs: left = TEAM, right = ME, score = OUR TIME

Barlow Condensed for every hero number

Make the result the loudest thing on the card

Let the card hug its content — height fits what's inside

Celebrate a win; fall back to a clean sign-off

✗ NEVER

Stamp "SCALED" or any consolation grade

Yellow as text on a light surface — highlight or fill

A second brand accent competing with yellow

A team total in the ME column of a pairs poster

Let the workout name out-shout the result

A fixed-height card with a void of empty space

A tall block of empty colour for the footer

Repeat the workout name in the title AND subtitle

Swap the wordmark for a logo or icon

Inter / Roboto / system-ui anywhere

Components render live from the poster engine – this doc can't drift out of sync.
